FRES-CO-LITE

Contains no White Lead or other poisonous ingredients.

Flows freely under the brush and covers densely, much more surface than the same amount of White Lead and Oil.

The White remains White, and the Tints are permanent.

It levels out, and flats perfectly.

Is very elastic and will not peel nor flake off.

May be used over painted or calcimined surfaces, iron, wood, plaster, burlap, canvas, concrete, etc.

Is made in White and eighteen attractive Tints and Colors.

Is far better than wall paper as it can be quickly and cheaply washed when it becomes soiled.

Is a thoroughly sanitary finish for interior use.

Is soft and restful to the eye.

Reflects more light than gloss finishes, and is decidedly more elegant.

It is specially recommended for use in Hospitals, Churches, Schools, Public Buildings, Dairies, Sanitariums, Bakeries, Office Buildings, Libraries, Theatres, Bath Rooms and the Home.

PURPOSES

ANTI-SUCTION WHITE

FRES-CO-LITE

It is very easy to apply and extremely durable.

Is a scientific combination of both Oil and Varnish, that dries out with a beautiful soft flat finish, very elegant and refined in appearance, and restful to the eye.

It dries without showing laps or brush marks, when properly applied.

Usually one coat will be found sufficient to make a satisfactory finish if White or one of the paler tints is used.

DO NOT FORGET—FRES-CO-LITE may be washed with soap and water, thoroughly cleaned and restored to its original beauty if it should become soiled.

The covering capacity of FRES-CO-LITE varies according to the surface to be painted and its condition. You will also find that the White and Pale Tints will cover better than the deep tints.

You may figure about as follows :—

350 to 500 square feet one coat over rough sand finished walls.

350 to 550 square feet over medium smooth surfaces.

400 to 600 square feet one coat over smooth surfaces.

Full directions for applying Fres-co-lite will be found on every package.
